

You're holding the first bike map of Pittsburgh since the Masfio Administration's Bicycling Map hit the streets in 1992. Needless to say, this map has been a long time coming! We've spent countless hours conceptualizing this map, cycling the city, and interviewing bicyclists familiar with all the different neighborhoods and routes. This effort has resulted in not just a great tool for cyclists, but one of the best maps of Pittsburgh available.

You're holding the first bike map of Pittsburgh since the Masfio Administration's Bicycling Map hit the streets in 1992. Needless to say, this map has been a long time coming! We've spent countless hours conceptualizing this map, cycling the city, and interviewing bicyclists familiar with all the different neighborhoods and routes. This effort has resulted in not just a great tool for cyclists, but one of the best maps of Pittsburgh available.

Pittsburgh is one of the most geographically unique cities in the U.S. The nature that makes our city beautiful - the hills, rivers, and greenways - also makes our streets steep, narrow, and full of twists and turns. Throughout the city, streets change names as they cross intersections and alternate from two-ways to one. There are very few north/south streets that connect multiple neighborhoods. More often than not, navigating Pittsburgh requires twists, turns, cuts, and jogs. Our way tries to illuminate and make sense of these streets to cyclists who are new to Pittsburgh, and to those just getting into bicycling. We hope that everyone, regardless of cycling experience, will use this map to commute safely and to discover new places and neighborhoods to explore.

We understand that Pittsburgh can seem like a **retrofitting** place to ride.

By encouraging more people to ride bikes and educating cyclists on what streets to use with tools such as this map, we're working to change this perception.

The goal of this map, like our other initiatives - advocating for bike lanes, bike route signage, shared lane markings, and bike racks - is to make the choice to ride a bike in Pittsburgh a clear one. Cycling is a fun, healthy, ecofriendly, cost-effective form of transportation that should be as viable of a choice as driving a car or taking a bus. If you want to see Pittsburgh become a more bike-friendly city, become a member of Bike Pittsburgh and help make it happen!

Have fun and ride
All of us at
Bike Pittsburgh

There is a long list of volunteers who helped with this map. First and foremost we'd like to thank Stephen Cummings, whose knowledge of Pittsburgh's streets is rivaled by few others. We also must thank Justin Cummings, Nathan Franzen, Brian Frank, Andy Griesbach, Jeff Irwin, Brian Knaack, Caitlin Lenahan, Eric McKean, Brian Stogoe, Lona Andrews, Louis Finkley, and all of our other volunteers who spent time in the saddle helping us examine the routes and adding much of the critical details that make this map truly spectacular.

Last but not least, we would like to gratefully acknowledge the Heinz Endowments for supporting this project and helping turn our vision into reality.

Thank you!

There are a number of streets on this map that are not optimal for cycling (mostly highlighted in yellow); yet you might find yourself wanting to use them because no other street connects to where you need to go. If you would like to see the City of Pittsburgh address cycling concerns on these or other streets, please call the Mayor's Request Line. Simply dial 311 or (412) 252-2627 on your cell phone.

This map is a work in progress. Please provide feedback to map@bike-pgh.org.

The Three Rivers Heritage Trail is a spectacular pedestrian and bicycle trail system that stretches for many miles, connecting dozens of neighborhoods and communities. Visit www.friendsoftheheritagetrail.org for a free guide to the Three Rivers Heritage Trail.

Bike Pittsburgh Board of Directors: Courtney Kitchelmann

TO: Saxonburg Blvd.
Middle Rd.
Hartwood Acres

Use left lane exit on north side of 62nd Street Bridge

A map of the study area showing the location of the study site (green dot) relative to the coastline and surrounding roads. The map includes labels for 'Lover Ln', 'Moline Ln', 'Baker St', 'Hunting Way', 'Over St', and 'River Rd'. A green line indicates a road or path, and a green dot marks the study site. The coastline is shown as a blue area.

Commuting by bike is fun and safe when you know the rules of the road and follow safety precautions. Inspect your bike, checking your tires and brakes before you hit the road. If you are unsure of your bike's condition, take it
