

Master Wayfinding Plan and Signage System

Chapter 4

MASTER PLAN	34
--------------------	-----------

Existing signs, signage needs, the plan and comprehensive system and guidelines

SIGN TYPES AND DESCRIPTIONS	39
------------------------------------	-----------

Trail head directional, identification and blaze signs, location indicator and geographic markers, orientation and pedestrian, hiking and bicycling signs, information and water trail signs, regulatory, warning and temporary signs

4.0 Master Wayfinding Plan and Signage System

EXISTING SIGNAGE

The existing sign products located throughout the area represent a mixture of good and very functional signs with confusing and poorly located signs. In some areas, sign products provide some identification guidance and direction, while in other areas signage is non-existent. The result is inconsistent and ineffective wayfinding and identification for most destinations throughout the Schuylkill River Heritage Area.

Because the existing signage is the result of many organizations implementing separate sign systems for their trail the overriding result is a sign system that does not make a comprehensive visitor information system throughout the heritage area. The graphic quality is inconsistent and problematic. Not only does this limit the aesthetic impact and hamper the identity function of the system, it has a negative effect on wayfinding functions as well. A consistent nomenclature and a unified look allow visitors to seek out wayfinding information quickly and easily, rather than having to scan every sign for useful information or looking for signs that don't exist for clues about which way to go.

SIGNAGE NEEDS

A range of issues affect the need for wayfinding signage along the Schuylkill River Heritage Area Trails. Questions that guided program development include:

- What information is needed to effectively locate injured persons?
- Whom is the program intended to reach?
- How comprehensive a program is appropriate?
- How effective is the current signage and what might be kept?

- Which destinations are we signing to?
- Who will purchase, maintain, update and replace the signs?

The team explored these and many other issues with a series of stakeholder interviews with relevant personnel, organizations and public agencies and a two-day tour of the heritage area. Based on their responses a program was developed. Issues that have impacted programming decisions include:

- Developing a location indicator system for emergency response
- Planning a system that incorporates existing sign products
- Raising the identity of the heritage area

THE PLAN

The signage plan provides for emergency response locator information, visitor information, site and destination identification, pedestrian hiking and bicycling, water trail signs and warning and life-safety information. These recommendations should form the basis for the development of a comprehensive set of design guidelines.

The signage system should play an important role in raising public awareness about the Schuylkill River National & State Heritage Area. A consistent graphic language that establishes visual continuity throughout the system should be developed. In general a strong but understated look is recommended, balancing clarity and effectiveness with brand/identity.

The sign drawings presented in this plan are of a schematic level of development. Phase II of this project should involve further design development and specifications of these products.

4.0 Master Wayfinding Plan and Signage System

THE COMPREHENSIVE SYSTEM

People are natural pathfinders; if you can provide them with simple, clear and consistent information to assist them in their journey they will regard that place as enlightened and truly welcoming. The comprehensive pedestrian wayfinding and sign system that follows has emerged from a user scenario approach. This approach imagines a series of typical users and their needs.

We had to imagine their destination, direction and critical decision points. Of course, the actual trajectories of visitors, residents and workers are as varied as the individuals, but by imagining a few of the most common sequences of movement, it is possible to develop a system that will serve many people efficiently and conveniently. This system also includes information signs with maps. These signs incorporate a unique location indicator system that will help both the visitor and emergency response teams locate victims efficiently in times of need. The visitor information system is intended to introduce visitors to the Schuylkill River Trails and convey a richer level of information about points of interest and services. Additionally visitors should feel safer knowing an emergency management and response system is in place.

Following is a description of each sign type and its function that have been identified as necessary components of a comprehensive pedestrian and emergency response sign system.

VEHICULAR TRAIL HEAD DIRECTIONAL/ACCESS SIGNS

Many trail heads are located in remote or obscure locations. Directional signs should be placed at strategic or critical decision points to help

visitors or emergency response teams find access points quickly and efficiently. Until a comprehensive sign program is implemented a modified identification sign may be used as a vehicular directional. Eventually these signs might be folded into a comprehensive regional sign system.

IDENTIFICATION SIGNS

Identification signs geographically mark entry points of access for the land and/or water trails. These signs may also identify ownership, welcome users and identify their location within the Heritage Area. They may carry messages about whether a portion of the trail is not accessible to emergency vehicles.

ORIENTATION SIGNS

The orientation sign provides location information allowing users to identify where they are and how to communicate their location in the event of an emergency. In the case of The Schuylkill River Heritage Area a special help number plaque that may be attached to existing signs or structures as telephone poles would be another type of orientation sign.

These signs may have detailed maps of local areas keyed to smaller diagrammatic maps of the heritage area and information that identify crossroads, natural or man-made places, or points of interest. In some cases the ability to hold and shelter brochures may be welcome.

PEDESTRIAN DIRECTIONAL SIGNS

Access guidance can be coordinated through a comprehensive sign

4.0 Master Wayfinding Plan and Signage System

strategy. Clearly identifying the land-based trail heads, branches of the trail system, river trail landings, campsites, exits to neighboring areas of interest, etc, all serve to provide increased usage, minimize confusion over location of trail, provide for safer passage, and advertise the trail's existence.

The pedestrian wayfinding system guides people from primary arrival or entry points to destinations, and gives visitors more detailed messages and symbols about what they have access to.

TRAIL BLAZERS FOR HIKING AND BICYCLING

These signs carry trail and path identification, rules and regulations, restroom symbols, caution and danger messages and various other messages that are essential to the user. The help number should also be included on these signs.

INFORMATION SIGNS

An information sign might illustrate the correct way to load a canoe or the perils of wearing cotton on the river, guidance for safe use of the trails or what types of problems to report and where to report them. The signs can be developed to carry water level indicators alerting users to dangerous conditions.

REGULATORY SIGNS

This sign provides the user with information about expected and acceptable behavior and use of the trails or parking areas.

Regulatory signage should be designed to work at several levels, starting with simple directional cues for drivers within parking areas

and ending with informational signs for pedestrians.

These signs are brand-free but should reflect the graphic language and colors of the Schuylkill River Heritage Area trail sign system. They can be introduced as an entire system in sequence or utilized individually as necessary.

WARNING SIGNS

The warning sign provides the user with life safety information. These signs communicate to users areas to avoid. Warning signs can identify such items as changes in surfacing materials or elevations, etc. on the walking trail, while warning signs for the river can include water level, water speed, and dangerous areas (dams, locks, bridges, rapids, etc.).

TEMPORARY SIGNS

Temporary signs can be used to replace a damaged or missing sign, provide additional information during an event, divert traffic around a section of trail where there may be a fallen tree, mud slide, accident, fire, or have any other number of purposes. General messages such as Trail Closed, Danger, etc. can be produced and made available to trail maintenance personnel.

4.0 Master Wayfinding Plan and Signage System

SIGN GUIDELINES

The following are general comments and guidelines. More detailed performance specifications and recommended procedures should be incorporated in the signage guidelines manual.

Following the sample journey is a description of each sign type, recommended location criteria and message content.

MATERIALS

Signs should be constructed of durable and vandal resistant materials. Recommended materials would be aluminum or steel painted with UV resistant coatings or powder coating. Messages should be silkscreened or in the case of night visibility be applied reflective vinyl. Decorative images or secondary colors should be masked and sprayed. Maps may be a color digital embedded product that has excellent exterior capabilities. Alternatives or porcelain enamel, anodized aluminum or silkscreened images on aluminum or steel.

Small add-on plaques can be painted aluminum with silk-screened messages, porcelain enamel, or printed self adhesive vinyl.

FABRICATION

Signs should be constructed of high quality materials with vandal resistant fasteners. For signs placed in a vehicular right away, break-away footings as required by PennDOT should be used.

MAINTENANCE

Removal and repair of dysfunctional signs is equal in importance to installing new ones.

A quick response to damaged or vandalized signs will reduce the “cop-cat” effect and reinforce the message that the environment is being managed and cared for.

SYMBOLS

It would be desirable to have a pre-approved set of symbols and messages for use throughout Schuylkill River Heritage Area. This would provide continuity and ensure clarity and safety for visitors. Additional symbols warning of restricted access for emergency response vehicles should be developed.

4.0 Master Wayfinding Plan and Signage System

3.1 SAMPLE JOURNEY

An example of the circulation routes is illustrated on the following page.

The messages illustrated on these signs are examples of the types of messages that might actually occur. More specific message criteria and related hierarchies will need to be developed as part of Phase II.

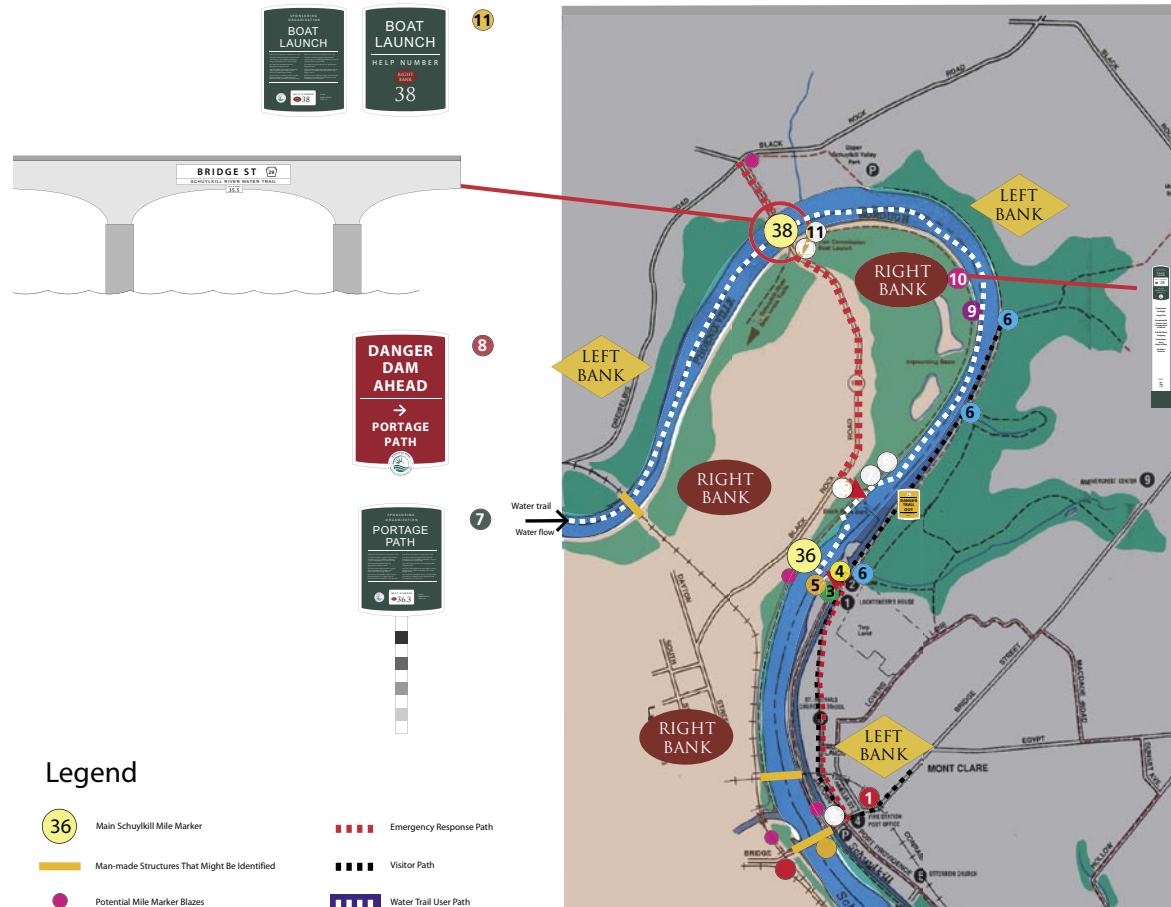

Selected routes bring visitors or emergency personnel into one of the trail heads designated where directional signage and safety signs are located. These signs occur at all important decision points, providing a continuous path toward each destination. They should be graphically consistent and designed with a minimum of text to be read easily.

Sign type key: Vehicular trail head directional signs, trail head identification signs, orientation signs, safety information signs, land trail directional signs, landing signs, geographic identification signs, and water trail signs, location indicator markers.

4.0 Master Wayfinding Plan and Signage System

TRAIL HEAD DIRECTIONAL, IDENTIFICATION AND BLAZE OVERVIEW

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
01 VEHICULAR TRAIL HEAD DIRECTIONAL <i>vehicular-high priority</i> Single-sided post and panel sign providing timely information to help direct visitors and EMS personnel to trail heads, landings and other emergency access points of the trail. These are used when access points are in remote locations. These trailblazers should eventually be supported with a complementary and comprehensive regional vehicular directional sign system. They may also provide information about restricted access to emergency vehicles. Vehicular directional signs should be attached to their own freestanding post as shown.	- vehicular visibility - night visibility - maximum vehicular exposure - located perpendicular to main thoroughfares - located off-site - located in advance of decision points	- directional arrow - trail head name - emergency access warnings - optional SRVN&SHA wordmark

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION

LOCATION CRITERIA

MESSAGE CONTENT

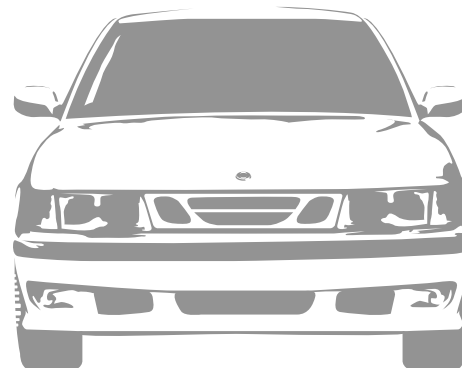

02 TALL TRAIL HEAD IDENTIFICATION SIGN

vehicular-high priority

Double- or single-sided post and panel sign providing identification for Schuylkill River Heritage Trail access points. Ideal for locations and sites having restricted space or site lines. Locate at entrances with maximum vehicular visibility from thoroughfares.

- vehicular visibility
- night visibility
- perpendicular to traffic
- located at main entrances to facility or site

- directional arrow (optional)
- trail head name
- sponsoring organization name and symbol
- location Indicator information
- Schuylkill River National & State Heritage Area symbol
- optional operating information

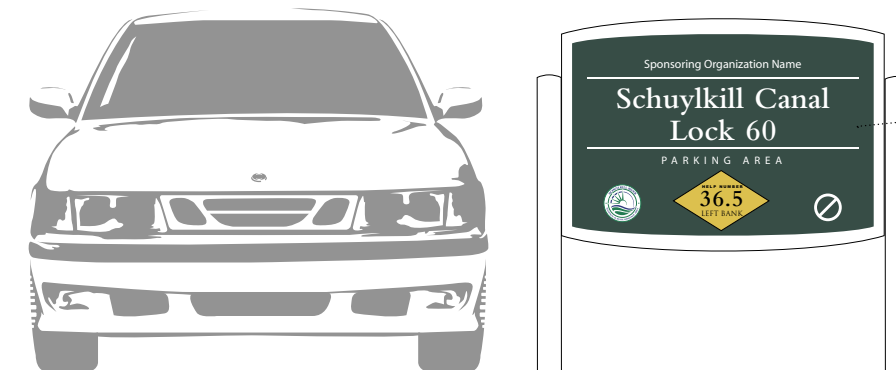

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
03 TRAIL HEAD IDENTIFICATION <i>vehicular-high priority</i> Medium size single- or double-sided sign providing identification for parks, landings, trail heads, parking areas and any other access points to the Schuylkill River Trails. Locate at entrances with maximum vehicular visibility from thoroughfares.	- vehicular visibility - night visibility - perpendicular to traffic - located at main entrances to facility	- directional arrow (optional) - trail head name - sponsoring organization name and symbol - location Indicator information - Schuylkill River National & State Heritage Area symbol - optional operating information

Drawings are not representative of final design intent.

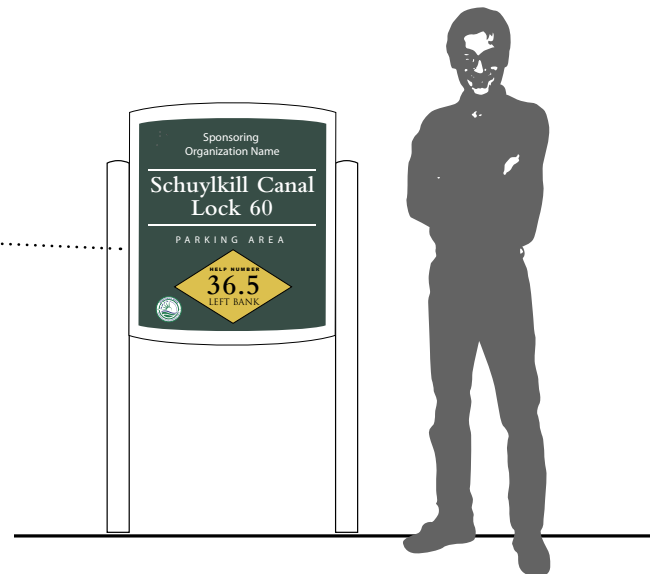

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
05 SMALL TRAIL HEAD IDENTIFICATION <i>vehicular-high priority</i> Small size single- or double-sided free-standing sign providing identification for heritage area trail head access points. Locate at entrances with maximum vehicular visibility from thoroughfares.	- vehicular visibility - night visibility - perpendicular to traffic - located at main entrances to facility	- Schuylkill River National & State Heritage Area symbol - Schuylkill River Trail - location indicator information

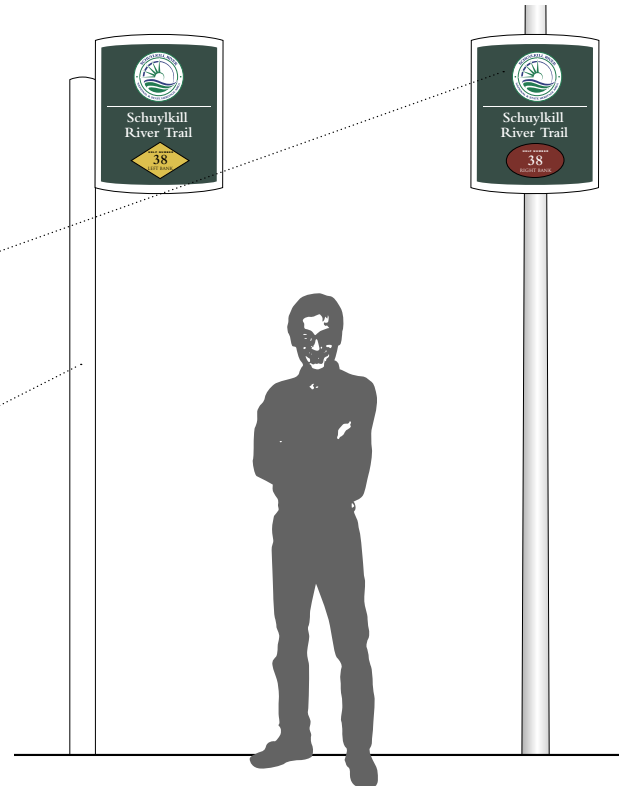

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
05 PEDESTRIAN TRAILBLAZER <i>pedestrian-high priority</i> Single-sided post and panel sign providing orientation information, located along directed paths of travel. Blazes are critical where the user may become confused such as when the trail merges with a road. Sign panels may be free-standing or mounted to existing poles.	- pedestrian visibility - perpendicular to traffic - located along directed path of travel	- Arrow (optional) - Schuylkill River National & State Heritage Area symbol - Schuylkill River Trail - location indicator information
		

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

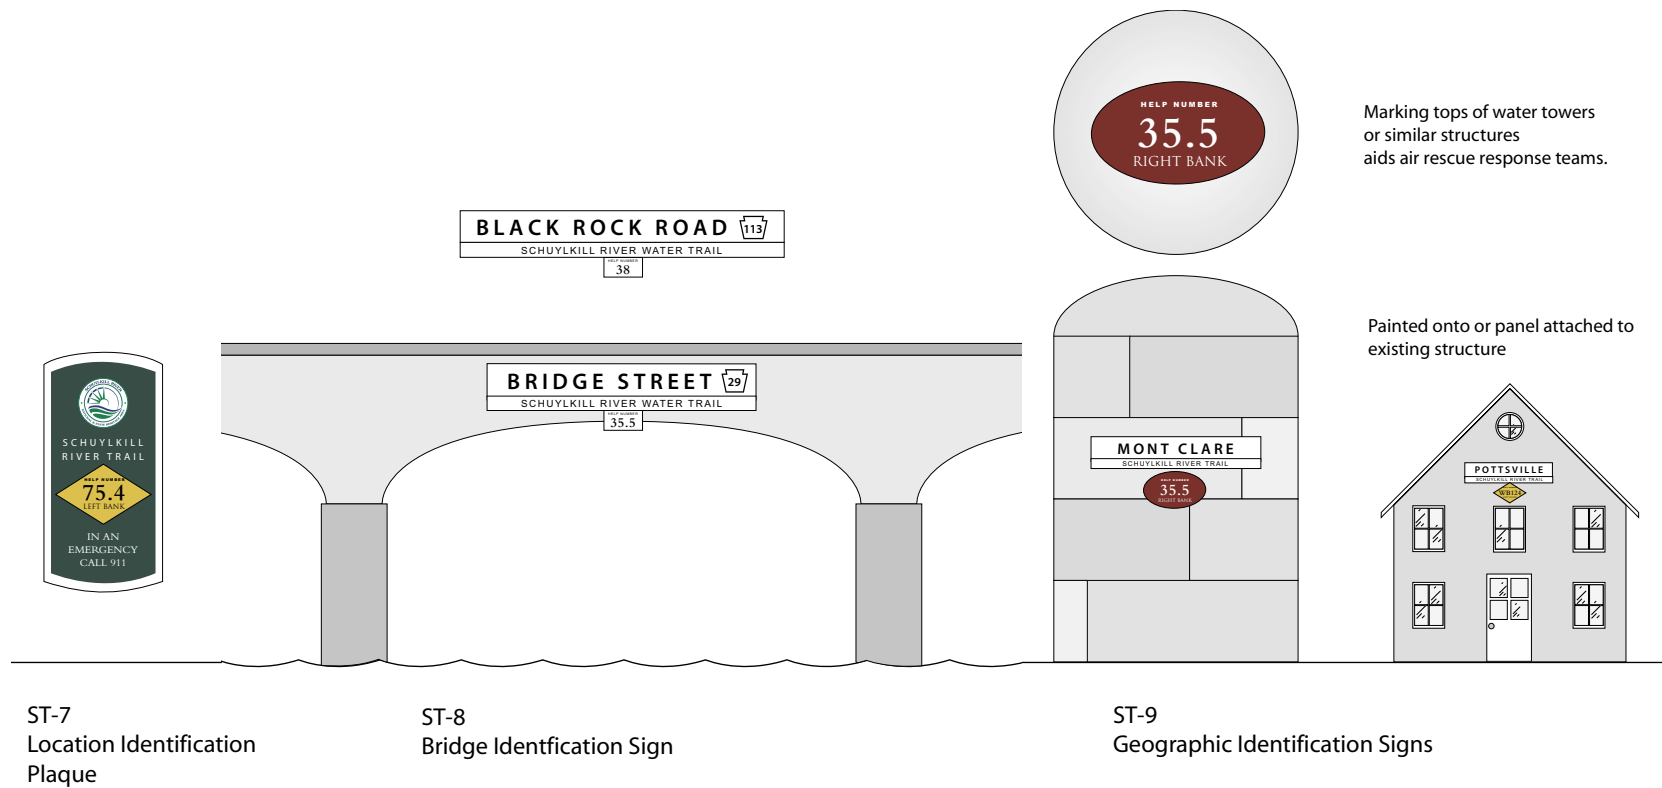

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
06 LOCATION IDENTIFICATION PLAQUE FOR EXISTING SIGNS <i>vehicular-high priority</i> Small size single- or double-sided free-standing sign providing location indicator information for trail head access points that have existing signage. Locate at entrances with maximum vehicular visibility from thoroughfares.	- vehicular visibility - night visibility - perpendicular to traffic - locate adjacent to existing trail head signage	- Schuylkill River National & State Heritage Area symbol - Schuylkill River Trail - location indicator information

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

LOCATION INDICATOR AND GEOGRAPHIC MARKERS OVERVIEW

ST-7
Location Identification
Plaque

ST-8
Bridge Identification Sign

ST-9
Geographic Identification Signs

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
07 LOCATION IDENTIFICATION PLAQUE <i>pedestrian</i> A plaque that may be attached to existing sign structures, poles, fences or free-standing on its own pole. The plaques should be placed at a minimum of one mile intervals along the land trails.	- pedestrian visibility - located along paths of travel	- sponsoring organization - trail name - location indicator information - in an emergency call 911 - Schuylkill River National & State Heritage Area symbol

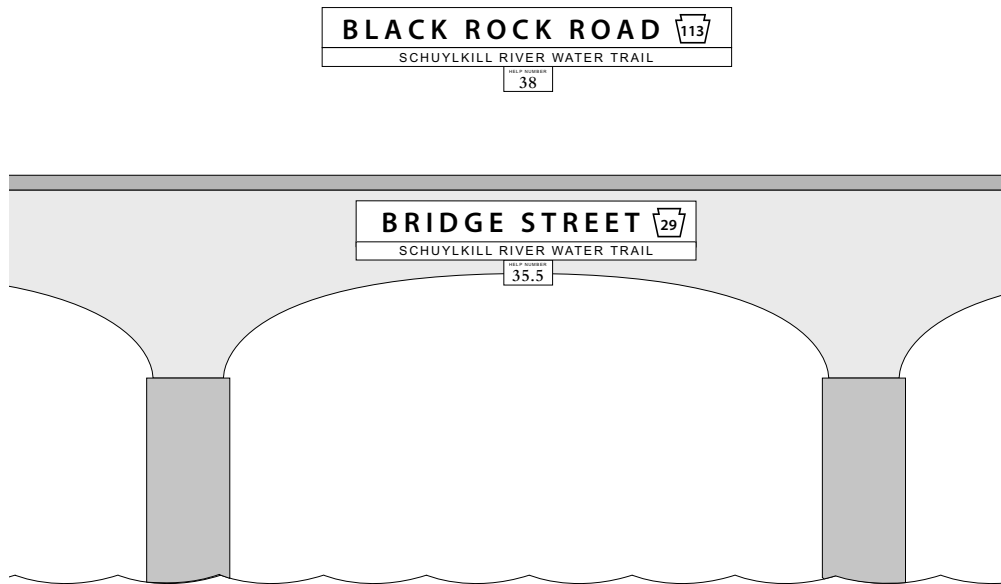

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

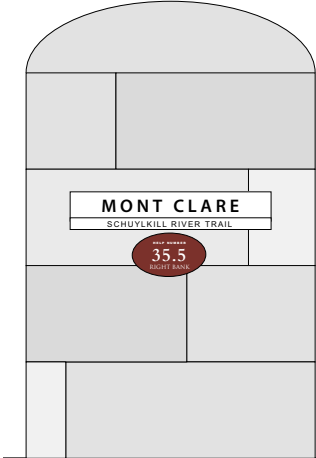

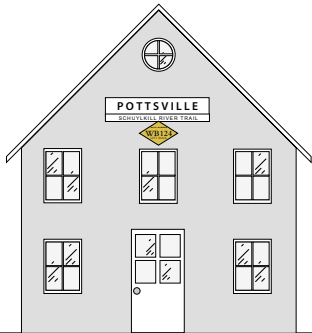

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
1 PEDESTRIAN DIRECTIONAL <i>boating – high priority</i> A sign mounted or painted onto bridges spanning the Schuylkill and its tributaries.	- mounted to bridge - scale for visibility from boats – 200 feet upriver	- road name - Schuylkill River Water Trail - location indicator information

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

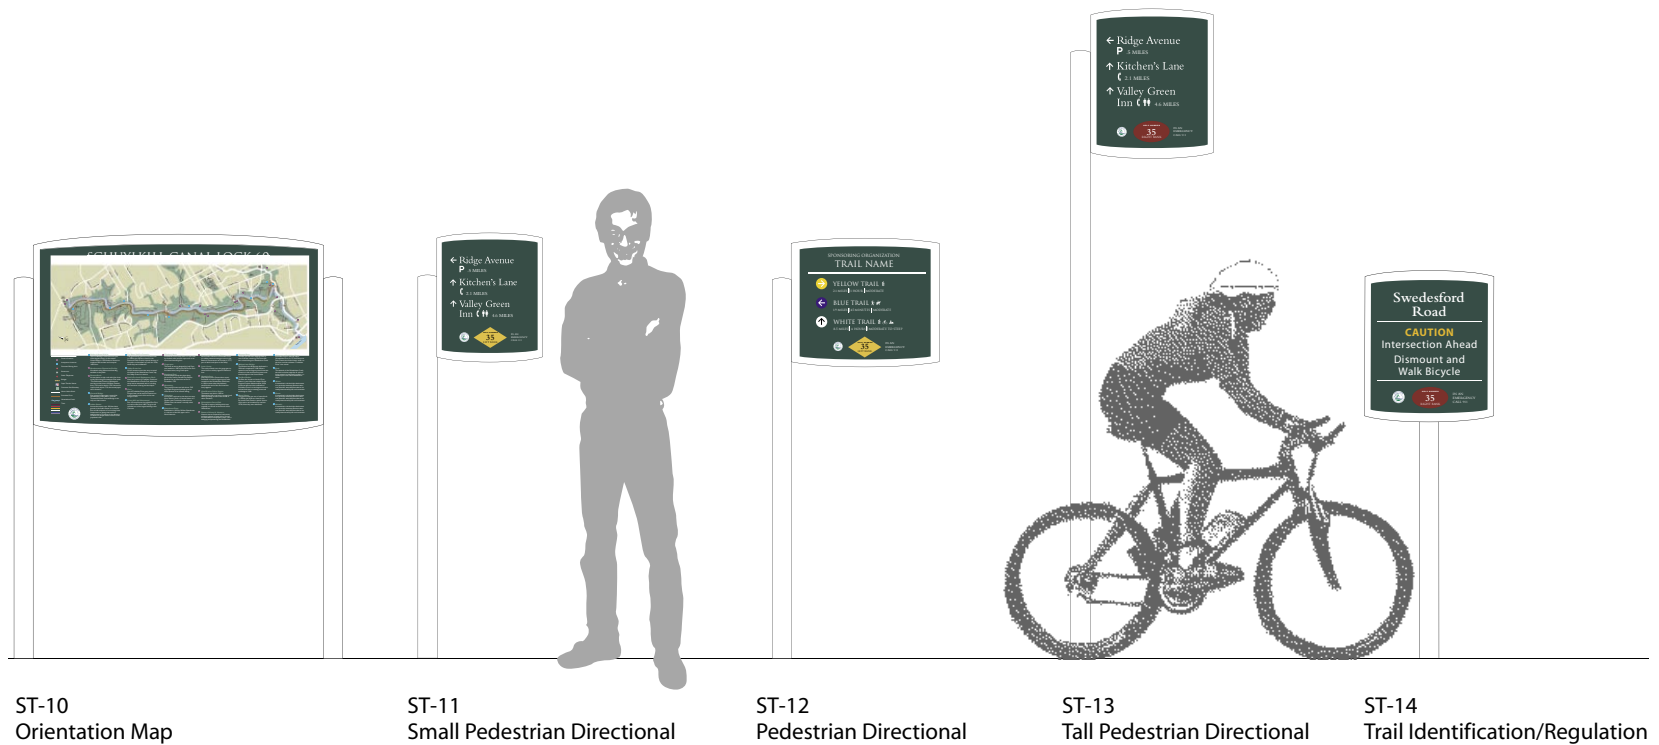

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
1 PEDESTRIAN DIRECTIONAL <i>pedestrian</i> A sign mounted or painted onto existing structures visible from river. Signs can be placed on top of structures to air rescue response teams.	- vehicular, pedestrian, boating visibility	- town name - Schuylkill River Water Trail - location indicator information
 	Marking tops of water towers or similar structures aids air rescue response teams. Painted onto or panel attached to existing structure 	

Drawings are not representative of final design intent.

3.0 Master Wayfinding Plan and Signage System

PEDESTRIAN DIRECTIONAL, ORIENTATION AND INFORMATION SIGN OVERVIEW

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
10 ORIENTATION MAP <i>pedestrian</i> The map detail would show access to trails, related visitor sites, parks, towns and neighborhoods. A key map and legend would accompany the Heritage Area map detail. Information on where the visitor may acquire take-away maps and other information might also be posted. This sign might be combined with community bulletin boards, pedestrian directional or informational signs creating a mini-visitor center.	- pedestrian visibility - parallel to path of travel - located at decision points	- community or site name - map detail of local area with key map to entire heritage area - Schuylkill River National & State Heritage Area symbol
The illustration shows a large, rectangular orientation map sign mounted on a tall, thin pedestal. The sign features a map of the Schuylkill River area with various trails and landmarks highlighted. Below the map is a legend and a list of locations. In the foreground, a cyclist is riding a road bike, partially obscuring the sign. The sign is titled 'SCHUYLKILL CANAL LOCK CO'.		

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION

LOCATION CRITERIA

MESSAGE CONTENT

11 SMALL PEDESTRIAN DIRECTIONAL

pedestrian

Double-sided sign with pedestrian information. Located along trail paths perpendicular to path of travel.

Alternatives to the single-pole or flag mounted double-sided sign are tableau-style signs, pictured above. These signs are lower and more discreet. Locate parallel to path of travel.

- pedestrian visibility
- parallel to path of travel
- located at decision points

- orientation information
- pedestrian directional information
- location indicator information
- Schuylkill River National & State Heritage Area symbol

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION

LOCATION CRITERIA

MESSAGE CONTENT

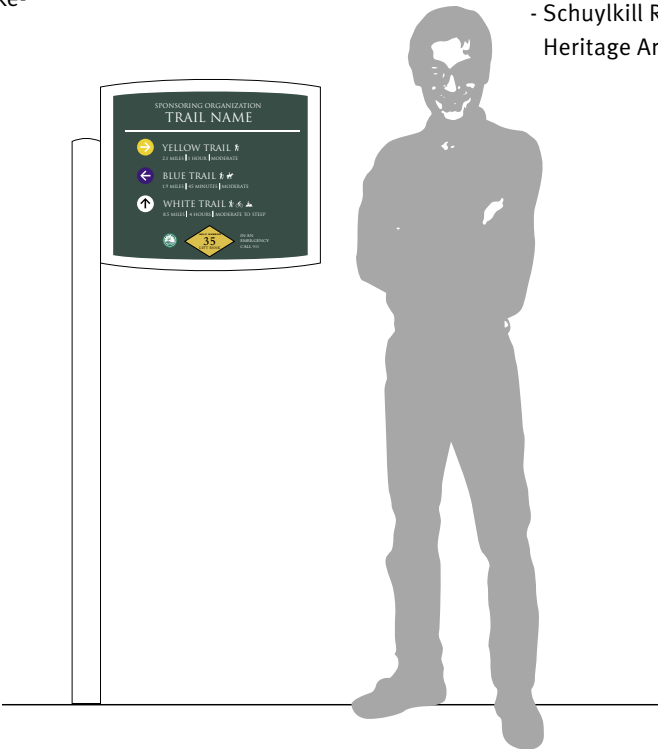

12 MEDIUM PEDESTRIAN DIRECTIONAL

pedestrian

Single- or double-sided sign providing identification of trails and information to destinations and sites within walking or bicycling distance, located along directed paths of travel and decision points. Sign may be keyed to other heritage area tours, literature and take-away maps.

- pedestrian visibility
- perpendicular to path of travel
- located at decision points or at intervals along paths of travel

- trail name
- close proximity destination information, - directional arrows
- symbols that key to trails, amenities, tours or programs
- location indicator information
- Schuylkill River National & State Heritage Area symbol

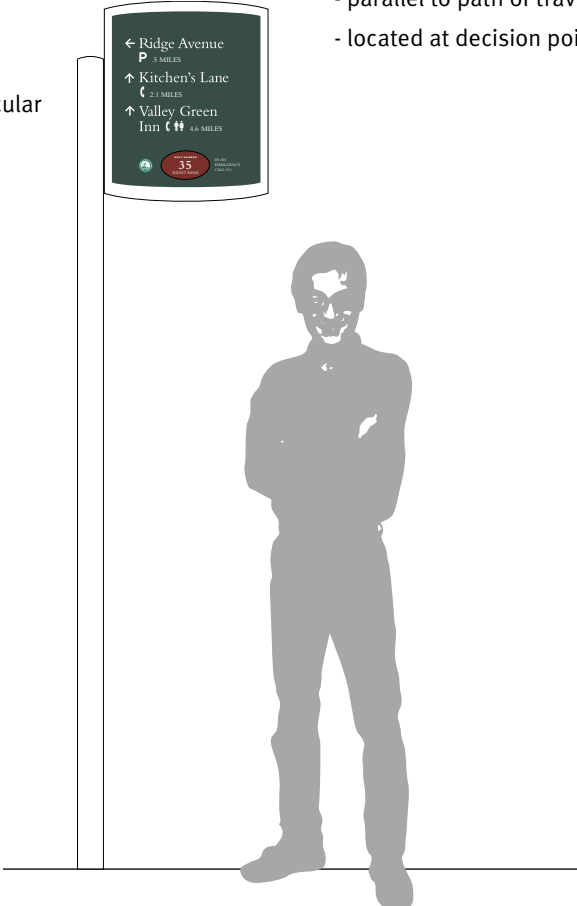

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

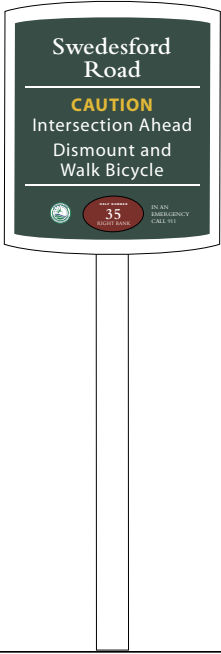

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
14 TALL PEDESTRIAN DIRECTIONAL <i>pedestrian</i> Tall double-sided sign with pedestrian information. Located along trails perpendicular to path of travel.	- pedestrian visibility - parallel to path of travel - located at decision points	- orientation information - pedestrian directional information - location indicator information - Schuylkill River National & State Heritage Area symbol

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

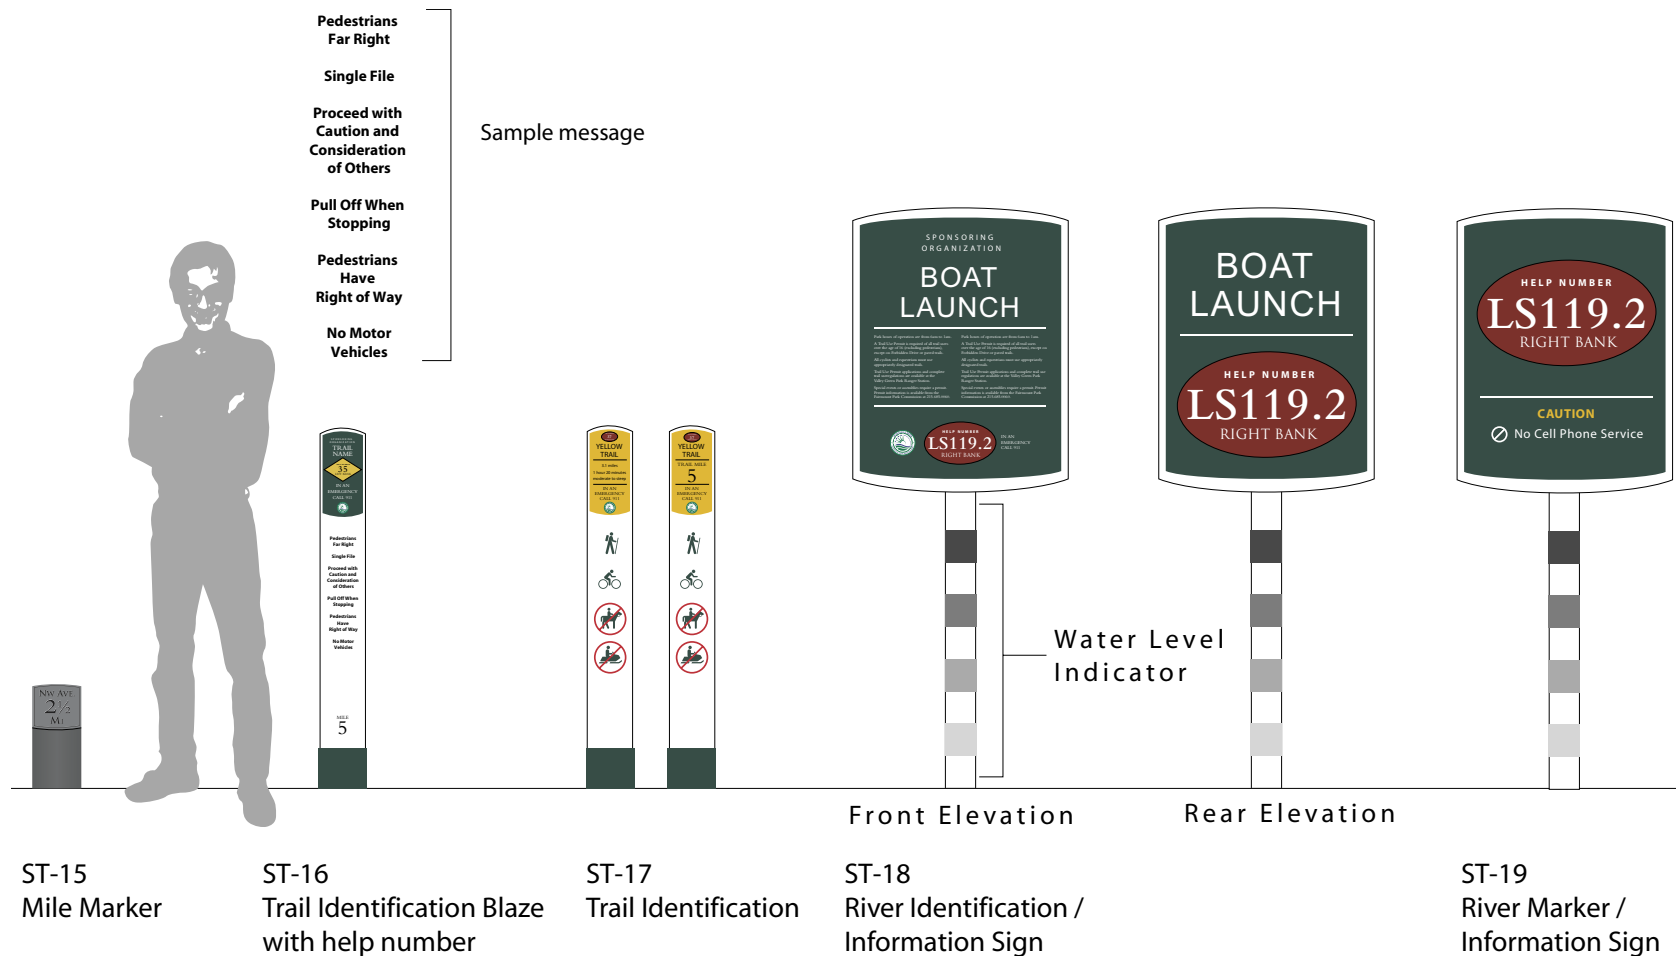

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
15 TRAIL IDENTIFICATION/REGULATION <i>pedestrian</i> Single- or double-sided sign providing identification of trails, crosroads and health, safety and welfare messages. Located along directed paths of travel and decision points. Signs may be used for trail regulatory messages such as “walk bikes across roads.”	- pedestrian visibility - parallel to path of travel - located just prior to decision points - perpendicular to traffic	- trail or cross-road name - caution message - pedestrian directional information - regulatory information - location indicator information - Schuylkill River National & State Heritage Area symbol
		

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

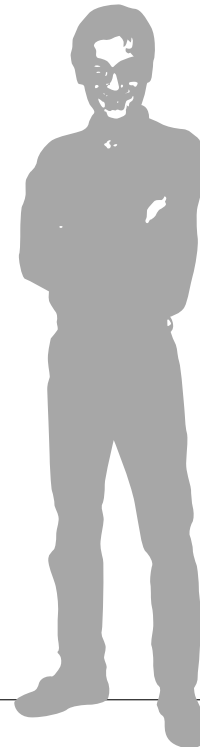

INFORMATION SIGNS OVERVIEW

4.0 Master Wayfinding Plan and Signage System

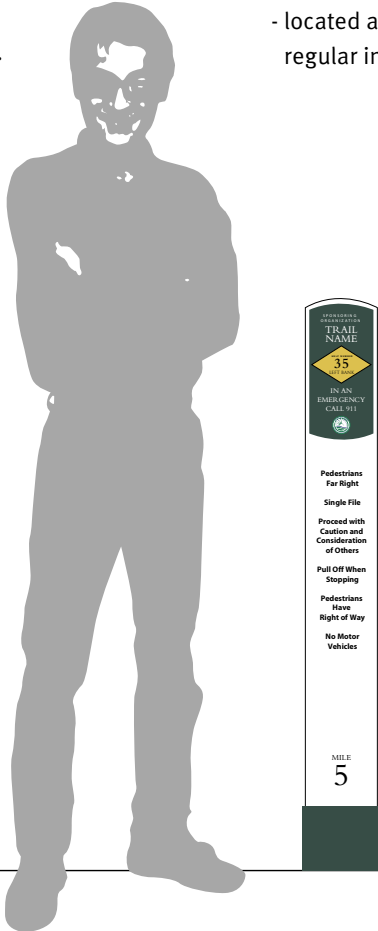

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
16 MILE MARKER <i>pedestrian</i> Granite marker located along paths of travel. Marker provides orientation information.	- pedestrian visibility - perpendicular to traffic - located along paths of travel at regular intervals	- mile information

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
17 TRAIL BLAZE WITH HELP NUMBER <i>pedestrian</i> Double-sided blade located along paths of travel. Provides orientation and may include regulatory information.	- pedestrian visibility - perpendicular to traffic - located along paths of travel at regular intervals	- location indicator message - recreation use symbol(s) - regulatory information - Schuylkill River National & State Heritage Area symbol - mile information
		Pedestrians Far Right Single File Proceed with Caution and Consideration of Others Pull Off When Stopping Pedestrians Have Right of Way No Motor Vehicles Sample message 

Drawings are not representative of final design intent.

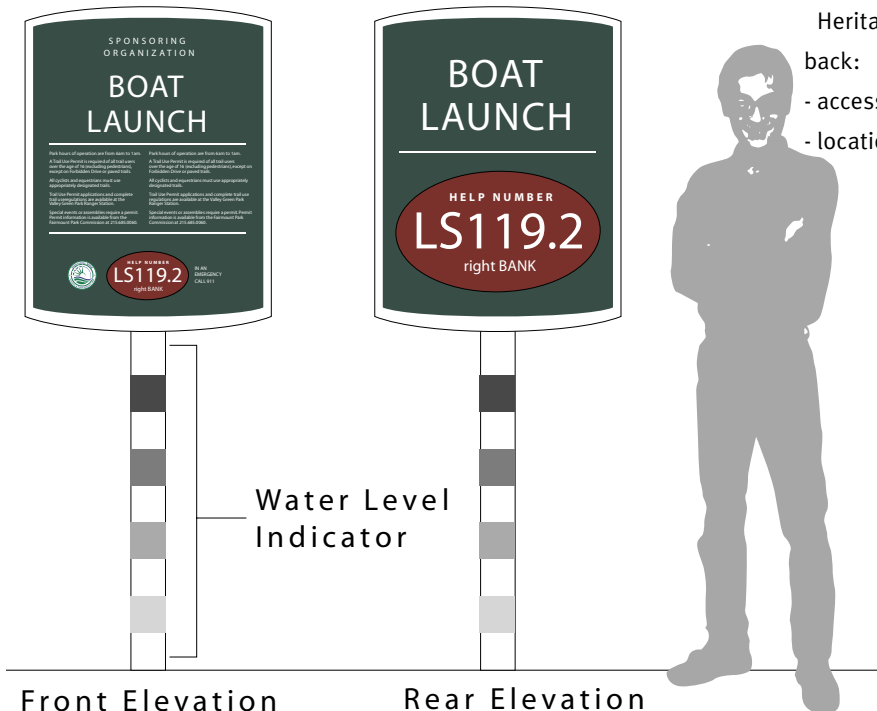

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
18 TRAIL IDENTIFICATION <i>pedestrian</i> Double-sided blade located along paths of travel. Provides orientation and may include regulatory information.	- pedestrian visibility - perpendicular to path of travel - located at head of trail and along paths of travel at regular intervals	- location indicator message - trail name - regulatory information - Schuylkill River National & State Heritage Area symbol - mile information - recreation use symbol(s)

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
19 RIVER – LANDING IDENTIFICATION/INFORMATION SIGN <i>boating – pedestrian</i> Double-sided single post and panel sign. Constructed of painted aluminum. Message on front is scaled to pedestrian users while message on back is scaled for legibility from greater distances. Pole may use graphics to create a visual warning system for high water.	- back is visible by boaters from up-river - angle rear sign panel 20° off perpendicular towards river - located at boat launches	- sponsoring organization name - access name i.e. Boat Launch - regulatory, health, safety and welfare information - location indicator message - Schuylkill River National & State Heritage Area symbol back: - access name i.e. Boat Launch - location indicator message
		

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System

ITEM / DESCRIPTION	LOCATION CRITERIA	MESSAGE CONTENT
20 RIVER – LOCATION INDICATOR MARKER <i>boating</i> Single-sided post and panel sign. Constructed of painted aluminum. Message is scaled for legibility from greater distances. May carry warning messages. Pole may use graphics to create a visual warning system for high water.	- visibility by boaters from up-river - angle rear sign panel 20° off perpendicular towards river - located along banks	- location indicator message - optional warning message

Drawings are not representative of final design intent.

4.0 Master Wayfinding Plan and Signage System
