

"Swerve" Racks

Swerve Bike Racks at work and on campus.

"SWERVE" STANDARD BIKE RACK

The Swerve Rack Details

"We have built the "better bike rack" and it's called the Swerve. It's secure, attractive, and bicyclists prefer it."

The design of the Swerve mirrors the bike frame, providing superior bike support and making it easy to secure both the wheel and frame. Swerves are popular with architects and universities because of their high aesthetics and space efficiency. Swerve Racks come in a variety of installation options: In-ground mounted, foot mounted and a freestanding rail mounted model.

FEATURES:

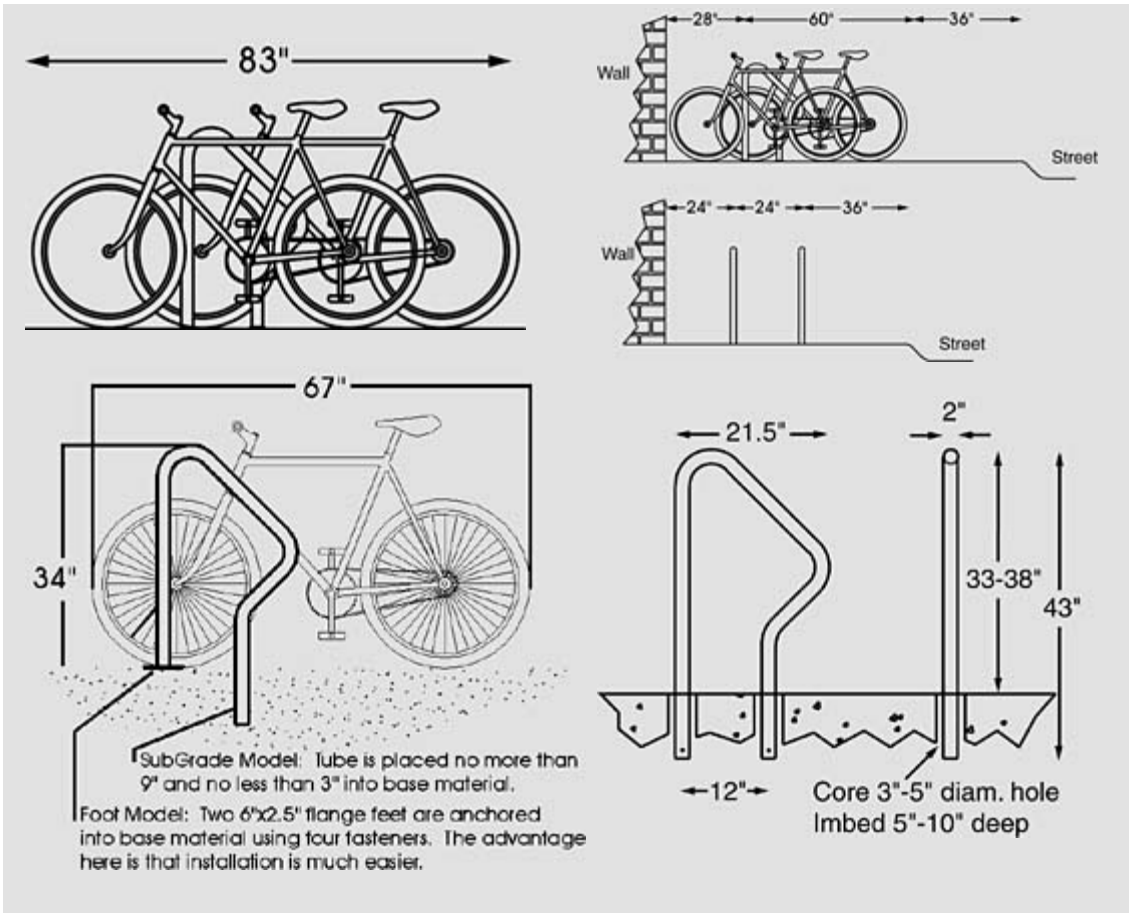

- High Security.
- Architectural Design.
- Shape mirrors bike frame - providing superior bicycle support.
- In-ground or surface mounted models available.
- One unit parks two bikes.

Why is the Swerve the best rack?

It outperforms nearly any other rack on the market in security, space use, and aesthetics. Here's why:

1. Staggers Bikes - The design staggers bikes so handlebars don't interfere with each other. (See diagrams)
2. Highly space efficient and orderly parking - The design of the rack allows for easy securing of one or both of the wheels using a U-style bike lock. Bikes are parked efficiently and neatly. Bicyclists like the swerve because it provides high security and superior support for the bike frame.
