Type	ST Sweeper	Seats	0
Length	24'2"	Width	7' 6"
Height	XX'X"	Weight	XX,XXX lbs (XX tons)
Motors	WH 306CD	Status	Stored, Trolley Display Building

The basic appearance of the snow sweeper did not change appreciably in the two decades separating the manufacture of M37 and this car. But there were significant structural improvements to this later model, such as the steel frame that supports the body.

This car was delivered to the Beaver Valley Traction Company, headquartered in New Brighton, Pennsylvania. Beaver Valley Traction and Pittsburgh Railways shared the same parent company. It was delivered at the same time as six such cars purchased by Pittsburgh Railways. The car came to Pittsburgh after the Beaver Valley line closed down in the 1930s. It is the only piece of surviving equipment from that company.
